London, at the signe of the hande
and golden Penne. Anno 1616.*

To the right Honorable my very good
M^r. S^r. Francis Bacon Knight, his Ma^{ties}
Attorney generall, of his most
Honorable privie Councell, and
Chancellour to y^e Prince.

Right honorable,

Y^e high Deservings having worthilie drawne yo^u into the ranke of publique government, wherunto
wisdom^e provided for forraigne as well as inward services, upon both of which this worke of
publique good greatly depending, as being of most use and best made knowne by waie of Missives,
though Detained (as to some parte of these my labors is allotted to save Discoveries, wherunto
they earnestly tending to make knowne even unto remote distant what Excellencies are wth
yo^u in perfection, But more especially to carry in front, Fame and Report, of yo^u many
vertues, To the furthering wherof as in what may preceede from yo^u meanest
servant, I sardon right he. if I zealouslie speak out in all occasions, having
noe other end of my saying error saving the affertion to merit ever y^e stile of

Y^e hono^r & humblest Servant
Richard Getling.

X superiori disputatione licet observare, quantam benevolentiam
patres sibi apud plebem conciliarint, cum ex decreto de militari stipen-
dio, tum modo contribuendi in publicum, ut stipendium solui posset.
Itaque si deinceps eandem beneficentiam declarassent populo in
ceteris rebus, dubium non est, quin eum sibi tantopere devinxissent,
ut omnium tumultuum ac seditionum tribunitiarum causas sustulissent:
quod in patres potius quam tribunos salutis suae spem posuisset: &c.

60075) 57168457295

108076) 520708659007

90765430) 1234567899876543

990099007) 5706450037049257

Reduction

All Greater Names  
are Reduced into a Lesser

By Multiplication

All Lesser Names are Reduced  
into a Greater

By Division

Ex: 507 : 5<sup>0</sup> 7<sup>0</sup> how many pence

Leaf of Joyn<sup>re</sup>

Weight & Measure &c  
In which Rule all Questions consist  
of two parts or Termes, the one Real w<sup>ch</sup>  
is y<sup>e</sup> Number proposed, the other Interrogatory

**FOR THE WORKE** or required.  
You must make that w<sup>ch</sup> expresseth y<sup>e</sup> value or quanti-  
ty of one of y<sup>e</sup> proposed & y<sup>e</sup> w<sup>ch</sup> expresseth y<sup>e</sup> value or  
quantity of y<sup>e</sup> Interrogatory or Required of one & same  
Then Multiply y<sup>e</sup> Number proposed by y<sup>e</sup> value of one of y<sup>e</sup>  
proposed & Divide y<sup>e</sup> Product by y<sup>e</sup> value of one of y<sup>e</sup> Interroga-  
tory.

The Order of  
Tare & Trett

**GROSS** is the whole intire weight w.<sup>th</sup> y<sup>e</sup> Hogsh<sup>d</sup> Chest &c<sup>r</sup>  
 Or whatsoever else contains the Commodity  
**Tare** is the Allowance Given for y<sup>e</sup> weight of y<sup>e</sup> Hogsh<sup>d</sup> Chest &c<sup>r</sup>  
 w.<sup>ch</sup> is sometimes 14. 16. 20<sup>lb</sup> &c<sup>r</sup>. w.<sup>ch</sup> being Deducted from y<sup>e</sup> GROSS w.<sup>t</sup>  
 y<sup>e</sup> Remayner is called Neat Except where Allowance is given for Trett  
 And then y<sup>e</sup> Remayner is called Subtle.  
**TRET** is an Allowance of 4<sup>lb</sup> in every 104<sup>lb</sup> on all Garbled goods or Goods  
 Sold by the Pound weight such as Tobacco Indico & all<sup>e</sup> spices.  
**CLOFF** is another Allowance of 2<sup>lb</sup> weight Claimed by Citizens of  
 London on every draft above 3<sup>lb</sup> on some sort of Goods.

After the Trett & Cloff is Deducted from y<sup>e</sup> Subtle  
 y<sup>e</sup> Remayner is the Net Weight.

# The Rule of Three

## LEAETH

By Three Numbers given to find out a Fourth  
which shall bear such proportion to the  
Second as the Third doth to the First

## For the work

You must Reduce your First and  
Third Numbers into one name and  
your Second Number into the Least  
Denomination menconed Then multiply  
yo<sup>r</sup> Second & third numbers together & divide  
y<sup>e</sup> product by y<sup>e</sup> first y<sup>e</sup> Quotient is y<sup>e</sup> fourth  
Numb<sup>r</sup> sought in such denominacon as yo<sup>r</sup> 2<sup>d</sup> num=  
ber was Reduced into.

# The Rule of Three Reverse

*Signes of the Rule* { If more require les  
Or les require more

If more require les that is if y<sup>e</sup> third  
term be more then y<sup>e</sup> first & require less then the  
second the Answer is by the Rule Reverse

If less require more that is if y<sup>e</sup> third  
term be less then y<sup>e</sup> first and require more then  
the second the Answer is by y<sup>e</sup> Rule Reverse

For the worke, Multiply the first and second  
Numbrs together for Dividend, & Divide y<sup>e</sup> product  
by y<sup>e</sup> third the Quotient is the Answer required

---

# Double Rule of Three

is either

## DIRECT or REVERSE

FOR the Right placing the Termes in this Rule In the Three Termes First set down the Conditionall part And Let that which is y<sup>e</sup> principal cause of Loss or Gain Increase or Decrease be put in the First place, That w<sup>ch</sup> betokeneth space of Time &c in the Second place And the other remaining be put in the Thurd place; Then place y<sup>e</sup> other two under their Mate Termes AND if the Term sought fall under the third Terme, Worke by the Rule DIRECT, by Multiplying y<sup>e</sup> three Last Termes together for Dividend, And the two first for Divisor

But if y<sup>e</sup> Term sought fall under the First or Second Terme of the Conditionall part Worke by y<sup>e</sup> Rule REVERSE, By Multiplying the first Second & last termes together for Dividend And y<sup>e</sup> third and fourth for Divisor

*INTEREST*  
is either  
*Simple OR Compound*

*Simple Interest*  
Is that which Ariseth or is Computed  
from the Principall only and Here  
all Questions are wrought by y<sup>e</sup> Double  
Rule of Three or Practice

*Compound Interest* Is that  
w<sup>ch</sup> Ariseth from the Principall and also  
from y<sup>e</sup> Interest thereof And therefore is called  
Interest upon Interest

# Rebate or discount

Is when a summe of money due at any time to come is satisfied by the payment of such present money as being put forth at a Certain Rate of Interest for the said time would become equal to y<sup>e</sup> summe first due

## REBATE or DISCOUNT

Twelve months is the first Number The Rate of Interest  
The Second And the Time proposed the Third

Then say if 100 and that Facit abate that Facit  
what shall the given summe The Quotient or Quotiente  
shew y<sup>e</sup> Rebate w<sup>ch</sup> being subtracted out of the given  
summe sheweth the Money to be payd presently

# Rebate or discount

Is when a summe of money due at any time to come is satisfied by the payment of such present money as being put forth at a Certain Rate of Interest for the said Time would become equal to y<sup>e</sup> summe first due

## REBATE or DISCOUNT

Twelve months is the first Number The Rate of Interest the Second And the Time proposed the Third

Then say if 100 (and that Facit abate that Facit what shall the given summe The Quotient or Quotients shew y<sup>e</sup> Rebate w<sup>ch</sup> being Subtracted out of the given summe sheweth the Money to be payd presently

Ayres  
Mrs  
Pennyship  
N<sup>o</sup> 136

June XI. 1663. About 4 p.m. • Covent Garden.

I received, of Mr W. Brereton, A Roll with 3 parchments fastened to it, which I would have copy out

1. In pursuance of my Lord Bacons proposall and discourse to Sir Henry Savill  
Touching Helps for the Intellectual Powers,  
printed in his Resuscitation pag. 225
2. And in confirmation of Dr Meric Casaubons Treatise  
Of the Force of Use and Customs.
3. And in pursuance of Mr Pells Idea of Mathematics, viz: That men may consider what means  
may be used to fortify the imagination, to prompt the Memory, or regulate our Reason, and  
what effects may be produced by the using of these means, and the constant exercise of them:
4. And also for a secret Character; if the Royall Society should have any occasion in such manner to  
correspond with any remote members
5. And as a Character proper for the Royall Society, in many respects,  
As 1. Requiring some Seriousnesse & Fixednesse of Spirit,  
2. And some Promptnesse in one or two branches (though those of the easiest operation)  
in Arithmetick, which is fundamentall to Geometry, Astronomy &c  
3. And assisting the Memory with a secret and undiscernable aide of Figures, Colours,  
and Proportions.  
4. And introducing a foundation to the most easy, Most naturall, and most Perfect  
Art of Memory.  
5. And (if once received into some generality of practise) very apposite for an Univer-  
sall Character to all Languages.

To these said Ends I have devised a peculiar Character, and a Frame or Table to be ordered  
according to some Propositions, which I lately offered to some Persons of Honour under  
the name of A Mnemonical Probleme and A Mnemonical Table

#### The Mnemonical Probleme

1. To devise Millions of Millions of Characters, so apparently differing each from other throughout  
the whole immense variety, That the eye at first glance shall discern, and distinguish each from  
other.
2. In a Mnemonical Table to appoint a distinct place proper and peculiar to every distinct Character.
3. By this Mnemonical Table and the use thereof to finde, suggest and provide the proper Character  
for each peculiar place, and with ready apprehension of the proper importance of the Character,  
which for the most part, or very frequently, containeth a whole word, a real matter or business.
4. To place or conceive the proper Character in the proper place, and in readinesse for every occasion, ac-  
cording to the immense variety of occasions may be offered: and all this in a moment or in  
the twinkling of an eye.
5. To devise (for this performance) Characters, all of such easy draught, that any ordinary Secre-  
tary or Clerke may at first triall be prompt in it, and engrosse them with dispatch.
6. To devise, that these Characters, of such immense variety, may (notwithstanding the variety) be printed  
to the importance of any discourse, with so much ease, facility and dispatch, as shall only require (at  
most) double paines of other printing.
7. To change the shape and also the force of this Character, and to vary it into Millions of Millions of dif-  
fering importances, To prevent the treachery of discovery, as oft as Occasion or care of safety shall require it.

All this, The Reading, Writing, Use and Practise of this Character, to all the purposes above specified, may  
easily be learnt in a few spare hours; if the learner be willing, and of ordinary capacity, and skill in  
clerkship, and prompt in the most vulgar parts of Arithmetick, viz in Numeration, Addition & Multiplication.

It is so easy, That to such as use any Cryptography or secret Character; It may be made more easy, and  
more ready for such use at the first view of a Scheme, then most of the draughts in Gustavus Se-  
lenus. And yet each proficient may raise the Secret higher, and cover it deeper, as himselfe  
pleaseth, to the utmost of his owne capacity. And uncommunicable to any person that is not of  
equall capacity. And hereby each person may ascend or descend to the measure of his correspon-  
dent. And it is very difficult to be deciphered (without the key) even by them that know the

Character; So immense is the field and the Variety so infinite.  
And He that acquires a facility herein for secret Character, does therewithall get all the Mnemonical  
aides and Topicks firme and (as it were) Naturall; and an aptnesse & almost a kinde of habit in y<sup>e</sup> prac-  
tise of the Art of Memory, at least for the foresaid uses, for an Universall Character & for y<sup>e</sup> acquist of Languages.

And the higher he ascends, the more he improves & enlargeth the capacities of his Intellectual powers.  
Neither is it so easy to be learned for the use of an Universall Character & Languages: but by special Directions  
and by Mnemonical Aides and by a Concatenation or linking of parts, which doe engage (by easy degrees) to a  
habit of the whole Practise.

And he that teacheth not with Ease & Pleasure, will hardly teach it at all: Nor Hee Learn it at all, who learn-  
eth not with Ease & Pleasure. As he that windeth off a Skeine of fine silk, drives into knots & entanglements  
except he submits his patience to Order, Gentle Motion, and Due Season.

An account of Mr Caleb Morleys Art of Memory

Extracted out of certaine letters written by Mr Hartlip to Mr Beal.

Jan 8. 1656 When above 25 yeares agoe I came to be acquainted with one Caleb Morley (who was presented unto mee at that time as a Very Miracle in the Art of Memory) I bought up all the booke that ever I could light on, to bestow them upon the said Gentleman. But after he had perused them, he would keepe none of them, alledging that they were little or nothing contributing to his Wonder-working Mnemonical Expedient, it being principally Naturall and very little Artificiall, which the Bookes mainly pursued, not hinting or treating at all of the perfection of those other Naturall helps, which Hee had so happily found out and applied to use. For having given severall experiments of his most stupendious memory (though betwene 60 and 70 yeares of age) in memoria Verborum Sententiarum et Rerum, He obtained a Patent, That his Method should be introduced (by sound of trumpet) into all the public Schooles of the Kings Dominions, when the Bookes were fitted for it. For he undertooke to performe that which no Locall or Artificiall Memory ever undertooke, which was To Remember 2 Hundred Thousand words backwards and forwards and not only literally, but also to point out the very letter or number of it, as nimbly as you could cast your eye upon the writing it selfe to finde it out. I have beene present at some of his performances, and have some specimen of it amongst my Papers, which are not so ready at hand. I meane of some hundreds of words made on purpose of a great length without any vowels, so that when he came to rehearse them, he burst into great laughter, saying that he could not mouth or pronounce any of those words, but that he would rehearse them Letter by letter both backwards & forwards or from any middle, which he did performe so readily and exactly, that we were all satisfied and convinced. And some counted him no better then a Conjuror.

But the great Courtiers made sport with him, and therefore sent often for his Company and proposed severall more Tryalls unto him, all which he performed, but they rewarded it with complementall praises Ut Pueri Junonis avem. For he had not daily bread to put into his or his family's mouths, which I in some poore measure supplied. And he being cast into Prison, there could none be found to free him, but my selfe. The cause of this his great poverty was chiefly his exhausting himselfe, upon a world of severall Clerks and Amanuenses, which (according to his directions) had transcribed the most fundamentall Authors in every Faculty, as The Originall of the Bible in Hebrew and Greeke, that the Text might be remembred in parato, by Divines, literally, verbally, commatically, periodically, sententious-ly, phrasedologically, really, harmonically, concordantly etc from one end to the other. The like Corpus Juris etc for Lawyers etc: And Aldrovandus, Gesnerus, Rondeletius etc for Philosophers. I could not prevaile with him to discover any of his principles or methods, Hee ~~carried~~ carrying constantly about him, betwene his shirt & Doublet, But three leaves in 4<sup>th</sup> which were his <sup>three</sup> grand Directories for memoria Verborum, Sententiarum et Rerum: Containing all the mystery of his Art. I urged him for the publikes sake, that so great a Mystery might not be lost or buried with him, and I prevailed so farre with him, that he sent me the Title of a large Discourse wherein all the Discoveries should be made, which should be left only in my hands, in case he should dye. But the Court hearing of his releasement, sent once more to Theobalds for him and coming from thence he fell downe and dyed suddenly, but I did not heare of it so suddenly, that I could make stricter Inquiries after those Paper-Directories, which he carried about him. Afterwards I heard of a vast Sea of his Papers in Duck-lane, which contained nothing of the Art, but faire transcribings of whole Lexicons and severall Authors; Those which seemed to have something of the Method I bought, with the Originall of his Patent. But no man that hitherto have seen them can be the wiser for them.

Idem. Janu. 22. 1656.

The Title page of Caleb Morleys intended Treatise of Memory, was as followeth.  
The richest Jewel that ever was by man presented unto man under the preaching of the Gospel.  
Or A Discourse of Memory wherein 1. Of my intendment in generall to the severall sorts of Readers.  
2. What Memory Naturall and Artificiall is.  
3. What mischiefs for want of a more cleare & effectuall Direction of Memory: and (suppose it be given, the fruits thereof.  
4. Whether such a pretended help be possible to be given, and the meanes to attaine the same Theoretically.  
5. What hath been done, or will be undertaken for prooffe and evidence thereof practically.  
6 The Conclusion

Thus farre ————— opera interrupta, minaeque

Murorum ingentes —————

As for

As for all the Bookes I shewed unto him, he was peremptory to judge,

1. That in many things they had done singularly well, but againe in many things that they were miserably too short, as ascribing more to the Instrument, then to the Principall Agent.
2. That they talked much of an Alphabet (which ex confesso on all sides was the surest hold) but gave it not but here and there by piece and piece.
3. That they mentioned likewise a Reall part, but gave it not in due order, and therein also made an Enumeration of things, rather in the generall et in confuso, then satisfactorily, and consistently in their specialls and particulars, as necessity requires.
4. That they mentioned also in grosse a Sententiall part, but never gave the Grounds of it.
5. That they did accumulate from time to time, a world of fancies and fictions, both their Loci et Imagines monstrously encumbering the minde (whereas Unity does fortifie) when a few Directions (and that for ever) might serve their turne.
6. Lastly, That they were alwayes plowing and riveting the Braines, as if they were alwayes giving of Strong and violent Physick, whereas the soft and gentle course (by faire meanes and degrees, pleasing and winning nature) was the best and onely way.

### Notes upon Mr Hartlib's Account of Mr Morleys Art of Memory

To the Honorable William Brereton Esquire

Honorable Sir. This is Matter of Fact, and of Unquestionable Verity, as appears by the Patent possessed by Mr Hartlib. And that it bore an extraordinary Value in that wise and deepe Kings judgement, It may appeare by the sound of the Trumpet Introducing it into all Schooles, and is further confirmed by the Attestation of a very Sober, Severe, Acute, and Judicious Person Dr Goade as you may see it under his owne hand, at the end of one of the Rolls of Parchment (which here-withall I send you) in these words, This Alphabet consisting of five Pieces of Parchment, and being a disposure of Vowels and Consonants, tending to an Art of facility and Method, invented by Mr Caleb Morley, and presented by him to the Kings Majesty, I have perused and thinke it most convenient and profitable to the purpose of the Author, and therefore (according to his desire) to be printed & published by his appointment, and to his use. Croydon. Septemb. 17. 1623

Thomas Goade

Such as knew the Gravity, Prudence and Warinesse of this famous Doctor, will believe that he saw good grounds to allow all that we here find under his hand.

- Here are in Morley many objections against Locall Memory, but neither Aristotle nor Cicero (who confessed that he had his Art from Simonides) nor Quintilian, nor Aquinas, nor other old writers pretended to the art of Memory, or recommended it, without the helpe of places and images. And whoever understands any glimpse of Morleys contrivances, will finde his Art supported both by places, order, and images, though he had not Art or subtilty enough to make such reflexions upon his owne Processe. And he that learns not his Contrivances Topically and with reference to place, order and Character (which is image, and an impressive and individuall Signature) He learns them to no Mnemonical improvement. Could hee point out the place (as Mr Hartlib sayes he could) or know or take the Account of his owne Abilities for 100 000 words, if he had no Topicks in his minde, no order in which they were digested. And where will the Salter or Apothecary finde his ware, if he hath not Topicks, both in his head & in his shop, or Ware house? Will he thank his Apprentice that had no regard to place the Ware commodiously, and in fit order? I shall rather acknowledge, That the very vulgar writers on that Argument have given some instructions worthy of deeper observations, than hitherto they doe obtaine either in Schooles or Academies. Some have handled those particulars most acutely, much for the improvement of our judgement and Knowledge, and clearly directing, How to discern, to sollicite & to perfect the operations of our Memory, which is a very spirituall, intellectuall, divine and wonderfull faculty. One of these Writers hath this Frontispice. A Child in a Goewaine, a Lusty Man on a Ladder shaking downe Fruite, and a Decrepit Old man Learning on his Crutches. And this the Motto Scala Viro, Currus Puero, quod scipio Aceste Hoc Memorativa prestat in arte Locus. And the Allusion is true, that (from the childe to the decrepit) Memory is assisted by Method (which containeth place and order) and also by image. And in this point I could satisfy any reasonable person, by the onely tryall of one or two verses, which should ayde a lamentable weak Memory to excell the best naturall Memory of any Man Living. And I shall as soon believe, That a Man may draw a Circle with his hand more perfectly than with a Compasse.

a Compasse; or can stirre a greater wright with his Arme, than with Screw, Leaver, or any other Engine, as that any naturall Memory can performe more without Art or Method (which importeth Place, Order and Image) than with these aydes, when habitually acquired.

t Ploughing and Rivetting the Braine &c. Some Lethargicall persons must be roused. It flies over & leaves no impression, if we doe not resent it with some seriousnesse of concernment and with some passion or affection. The wife, who forgot to tell her Husband of the threats of a Dangerous person, had not at that time a Bridall Love, which would have kept the Heart freshly boiling, till she had secured her Husbands life. And therefore though Anger be a fit of madness for a time, disturbing the Spirit, and dislocating the Memory, yet they whose passions and affections doe easily take the deepest impressions, have naturally the best Memory. Addam et illud tam experientia prope quotidiana compertum, quam doctissimorum gravissimorum hominum auctoritate comprobatur, eos tanto ceteris et Memoria et Ingenio praeferre, quo ad iram exacercentiamque propensiores extiterint. Thud Chappusius. No men doe Learne thoroughly and feelingly, till their spirits (by some concernment or engagment) are opened to apprehend an Interest. But we have not so much neede of Mr Morleys Philosophy, or of his reflexions upon his owne Art, as of the Art it selfe, and therefore I passe over some other of his Expressions in Silence.

r An Alphabet is ex confesso on all sides the surest holde] Sir. Of this I offer a large prooffe, That the Alphabet may easily be made an Universall Engine or Draghet to catch in all Things Words & Sentences to the use of Lord Bacons Abscisio Infiniti. And other aydes of Memory by him recited Orig. nov. L. 2. Apho. 26. The practise of the Alphabet is the renewall of youth, The first & indelible impression of Letters The most advantageous Handt (as by a Secret Scheme I can shew you) That doth not so much trouble, as ease & please the minde.

a Though betweene 60 and 70 ysaies of age] And then perchance as well, as when younger. The Alphabet having gotten the impression in our Childhood. It is true, that the Memory of Names and single words feels the first stroke of age and decay, when the Receiving and retaining faculty of the minde grows benumbed, stupified & obtuse, the Ligatures of the Braine being overladen with Rheume (So Kitchen-Tongs cannot take up the pins of a Watch, as smaller pliers doe) Yet in this decay, when they cannot remember where they laid their gloves, Staffe or Spectacles, which just then they had in their hands, they can never the lesse weary us with endlesse Stories of their younger dayes, and of their owne brave achievements. And since Art is an Ease & help to Memory, the Aged have most need and may take most benefit by this ayde: As they finde Crutches are not their Burden, but their Supporters.

q. u Ascribing more to the Instrument, then to the Principall Agent. The soft and gentle course is best. In all my designs my Eye was principally fixed on my Lord Bacons advertisement for strengthening the Intellectuall faculties: which is done best of all by practising them upon themselves (which is the fittest & noblest Object) and by Exercise, which is the fourth part & almost the totall of Artificiall Memory. But how should we entice the spirit of an Acute and Passionate or Sensible Person to beare this Burden of Exercise? This was the Mainc Point: This the Hard Taske; And this I have by this Stratagem of Mixed Arts absolvd. Whilst for a Philosophicall Reservensse wee affect a peculiar way of Cryptography, which I propose, We grow prompt on a sudden in the use of Mr Morleys Expedient, and immediately fitted for an Universall Character and for the speedy acquist of Languages, and then, by so much Regular & orderly practise, the Art of Memory becomes so pleasing & winning, that it is lesse trouble to Advance than to Rest. For, if a Bell at the Height of Full Ringing is not suddenly stopt, The Spirit of Man, which is framed for an Eternall Activity, will be lesse inclining to forbear an Ingenious & Noble Operation.

Honorable Sir

your obliged & hearty servant  
J. Beal.

End of the third Libramet.

By the conclusion of his former roll of little parchment (In his notes upon Mr Harleib's account of Morley) I see that these are Mr Bralies steps. (1) Philosophicall Reasonnesse makes us desire a peculiar Cryptography. (2) This suddenly makes us prompt in Morleys Expedient (3) it immediately fills us for an Universall Character and (4) for the acquirement of Languages (5) This brings y<sup>e</sup> Art of Memory.

Now I proceed to his grand Roll which I first saw June 12. 1663

It is about  $7\frac{1}{2}$  feet long or 2 yards & an halfe (90 inches <sup>ells</sup>) (Every line about 1 foot or 12 inches long) Its title or first line is this. Proposals for an Universall Character.

lin. 20. These five characters will suffice . \ O X X More may be added for ornament, beauty or dispatch as the printer or scribe pleases.

lin. 28. I shall deny him to be capable of the first proposition in Euclide, who cannot learne our Expedient in an Houre. He yet can bee ree peepe (be he young or old) he is apt enough for this our art.

lin. 31. By a most usefull excellent & divine Expedient (which I doe heartily Recommend) I shall make it so easy, that whosoever is fit to learne his Lesson in Virgil or Tully (as all doe in Eaton, Westminster, Winchester schools) such a memory may at 20 dayes get a facility in the perfect use of this Character for the ends above said. And in that Acquest He obtains also a facility for any other Language, Learned or Moderne.

lin. 39. The very shape or Image of the character will immediately direct him to the proper place & importance of any letters, Words, things, matter or sentences which his Phancy shall require. So easily to the number of 160 thousand characters (for on that just number, for some secret advantages of facility, I have, for the present fixed) as if it were no engagement of his minde at all. Not so much as to interrupt or divers his invention.

lin. 46. We may expect, that in this Character every Extraordinary Person will delineate his owne peculiar apprehensions in a peculiar style. I undertake to order this Character that it may import the best & deepest expressions that are now extant in any Language.

lin. 87. We shall in our Mnemonical Table of words (and neere the beginning) put downe such Articles, Pronounes, Adverbs, Conjunctions & words signifying Person, Gender, Mode, Tense & case, as will import the part of speech and Government, Action, Passion &c

lin. 100. In the English Table we shall put the which answers to Languages which have Articles &c

lin. 103. — Catholique Rule: viz. To avoid all unnecessaries and to affect Brevity & clearness (as farre as we can joine them together) as the two maine points of our Philosophicall Elegance.

lin. 115. wee, who would be the Restorers of old & Exiled vertue, and the improvers of intellectuall Capacities, may expect some degree of Diligence in the use & understanding of our Character.

lin. 122. — If the very opening the Character were directed & performed by a Mnemonical Expedient, which (besides the facilitation towards the use of the Character) would be a Key to best Languages, Arts & Disciplines: And also furnish a Storehouse and Treasury for all sorts of valuable knowledge And withall would improve all our conceits and disciplinay faculties, such a Prize as w<sup>o</sup>ld might possibly engage the Learned all abroad, and (as I have said as it could be spread) it might prevale into custome. And this is our present Oblation. (lin. 125)

lin. 126. — The Art of Memory [is] the Treasury of Disciplines and Literature. — The true mother of Languages, Eloquence Arts and Knowledge — It exalts, quickens, strengthens, and enlarges the Conceipt, Invention & Phancy (even to Reproach or Envy) It maturith judgement & reason, by preparing & suggesting a large field for our Election & Ranging all Overtures in fit & due order for a perfect view: Without which way of comparing and Examining All things, wee can take up no grounded Result, nor give any sound judgement upon any matter.

lin. 154. — It is but an easy work of very few houres to turne the Table and all needfull Directions into any Language

lin. 156. — The whole Table & all necessary Rules & Helps will not take up above a full sheete in any Language.

lin. 160. — those small Arithmetical figures [0.1.2.3.4 &c] have not been known or in use amongst us Christians, (save yet 400 years.

lin. 164. — if the Royall Society (of whose Growth, Lustre, Permanency & influence, I cannot forbear to ominate the best successes, though at this time there be nothing visible but the Virtues, Resolutions & Constancy of the Members) shall appear for a Secret or Universall Character, of like accommodableness [as 0.1.2.3] it will in a short time prevale.

lin. 187. — This without further Obstruction may arrive to maturity, as soon as R. Soc. shall say Fiat.

lin. 196. — I may now proceede to make my Proposals more particularly. (lin. 197)

lin. 198. I have framed a Mnemonical Table, in which 2400 Words (which should be chosen the most usefull in all conferences and discourses generally) may be placed six in a Row which makes just 400 Rows. In the front of each of these Rows is one or two Mnemonical Remarks, which are devised & proper to give all the Mnemonical aides of Place, Order & Signature, and so to be managed, as speedily to get a habit in the practise of these aides, whilst we seeme only to attend the use of the Universall Character. And the Characters prefixed to each row, are the very same which served for the improving Cryptography mentioned in my Narrative of the Mnemonical Character. So that from the Cryptography (which is learned almost at the pointing of the Finger by the help of an Initiating Table) the transition to the use of the Universall Character is immediate & most easy, having the very same just number of characters, the same manner of Operation, and the Characters no otherwise distinguished than as followeth.

206 The first word in each Row, is to be noted by the very same character, as before used in Cryptography; The second, 3d, 4th, 5th and 6th word throughout each row, when they are to be used and produced, are to be distinguished according to their order and Place in the Row, by those 5 remarks C. I. N. — U (or any other) over each proper character. By the same number of characters, and the same Operations, a like number of Histories, Apologies

211. Apologues, Emblems, Sentences, or Proverbs (which are reserved to improve somewhat of the spirit or addition  
 each nation, and may be chosen the most instructive out of every considerable language) may in the same or  
 facility be learned used & noted. And hence also may be discerned, How soon 400 short lines (each con-  
 six words and no more) of our best known language, may at 20 tryalls (20 at each Essay as doe in-  
 valls) be learned: Especially when assisted by all the remarks & memoricall aydes and by the secret  
 powerfull way of practise. And he that is prepared or prompted with such a choice of the most cur-  
 & leading words (in any known language) so remarked, may (by the same remarks in any lan-  
 lin 217. which he desires to learn) be enabled to launch into the writings, and take up the discourse in any  
 Language. At least, if he be of such pregnant capacity as was Julius Scaliger, who began to learn  
 (as himselfe reported) by reading Homers Iliads, & making a Grammar in his Brains, whilst he had time  
 lin 220. his course of reading: And though every man be not a Scaliger, yet the dullest may finde much assistance by & meth-  
 lin 222. I. Objection. Bacon de Augm. Lib. V. Cap. V. says, The Art of Memory is in the mind as Tumbling in the Body; Matter  
 strange & without Worthimselfe and Barren. I referre you to my L. Bacons own judgement & dis-  
 as the best answer. He says, there is no Danger or Burden in it, that may Hurt or Oppresse Naturall Memory.  
 He there complaines that the Faculty is  
 better practised of that Art, than those  
 for intellectuall Powers, he blames us for  
 Vigor, as much as Tumblers doe expect  
 lin 232. these Tumbling tricks and that  
 no man in hearing him, the easy way  
 and employed on those considerable Ends.  
 II. Objection. I said above [lin 41] that  
 [in lin. 198] I offer but 40  
 Memorickall Table. In present tis enough  
 Words or Things Topically, does repeat  
 lin 240. And for the 2400 words he provides  
 will write halfe a dozen sheets, with  
 writers. So heere, 'tis one thing to learn  
 another thing to learn them so, as  
 able to recite them backwards or for-  
 lin 245. wardes as needles. A needle is  
 the size of the smallest needle, and then  
 hang on or take off any of these small  
 small things, the better we shall know  
 of the like kind: And the longer the time  
 in a burden of say. All this belongs to our  
 III. Objection. To our purpose of searching  
 a losse for want of the names of Plan-  
 lin 251. I answer (1) To those 2400 words may be  
 Music, Astronomy, Chemistry, Of which kind  
 more perfected in relation to most Minera  
 Mathematicians shall think fit to give  
 their Treatises may be rather Demon-  
 vers taken from the Arabians, let us  
 lin 257. those which we now use; that ours may  
 (2) We may add as many of the best de-  
 well receive. Especially, such as are of the  
 common Cryptographi & Brachygraphi  
 recovery of all antient and true de-  
 lin 272. (3) We may take in all Proper names of  
 which hath many peculiar advantages.  
 let us use the names, which the inhabit-  
 [See the small Geographical Dictionary  
 nations and with this [Beats] Character  
 to Travellers: And would divulge the  
 or in any Translation so remarked.  
 lin 281. (4) All plants, beasts birds, fishes, reptiles, in-  
 best all over the world bear such names;  
 are most naturally growing, or most  
 Language. We may doe the like in the  
 lin 306. (5) We have a far deeper & more Philo-  
 into the secrets & latent Schematis  
 the grounds, rules, rootes, or Evidences  
 their names, as some say, Adam dis-  
 trading Philosophy: to this remedy we  
 lin 324. gently the distinct shape & the Oper-  
 of Names. [See Dr Junyus, in a sho-  
 of Trees, Herbs, Shrubs, Flowers by Ep-  
 trunks, stems, branches, leaves, Stal-  
 them than can be particularized & much lesse ascertained by any Appellative in any Language whatsoever.  
 lin 350. When we have reduced our literary Elegancies to Nature, Reason, Art, Truth & Wisdoms, then we may expect more Peace,  
 Unity, Friendship, Accommodations, Honesty, vertue, and true Christianity all over the World  
 Conclusion. I am willing it should be suspected, there is some great cause of this Long Apology: That I may blush the lesse, when requir-  
 produce the prooffe to the Key. In relation to the meanes and my claime, I cannot depreess them too Low: And I can  
 raise expectation too high for the Ends, which (in mine own View) are more Important than I dare utter  
 If accepted, I serve: If not, I am free: and shall take my leave fairly in peace & humble silence, resigning this  
 FINIS.

lin 211. Apologues, Emblemes, Sentences of Proverbs (which are referred to more somewhat of spirit or addition each nation, and may be chosen the most instructive out of every considerable language) may in the same or facility be learned used & noted. And hence also may be discerned, How some 400 short lines (each consisting of six words and no more) of our best known language, may at 20 tryalls (20 at each Essay at due intervals) be learned: Especially when assisted by all the remarks & mnemonicall aydes and by the secret powerfull way of practise. And he that is prepared & prompted with such a choice of the most current leading words (in any known language) so remarked, may (by the same remarks in any language) which he desires to learn be enabled to launch into the writings, and take up the discourse in any language. At least, if he be of such pregnant capacity as was Julius Scaliger, who began to learn Greek (as himselfe reported) by reading Homers Iliads, & making a Grammar in his Brains, whilst he had time for his course of reading: And though every man be not a Scaliger, yet the dullest may finde much assistance by & methinks

lin 220. I. Objection. Bacon de Augm. lib. V. Cap. V. says The Art of Memory is in the mind as Tumbling in the Body; Matter strange without Worthinesse and Barren. I referre you to my L. Bacons own judgement & disinction as the best answer. He says, there is no Danger or Burden in it that may Hurt or Oppresse Naturall Memory. He there complains that the Faculty is so weakly inquired [into] He offers there a better precept, and requires better practises of that Art, than those he found then received. See also his Nov. Org. lib. 2. Aph. 26. And in his for intellectuall Powers, he blames us for not seeking those Aides which may make the mind excell in Activity. Vigor, as much as Tumblers doe expect others that are unpractised in the Feates of Activity. At length these Tumbling tricks and shall leave them to those that have leyfure to regard them. Yet is no man in pursuing him the easy way of gaining that agility of minde. Neither is it barren, when it is and employed on those considerable Ends above mentioned.

lin 222. II. Objection. I said above [lin 41] that I fixed in present on the just number of 100,000 Characters & places. [in lin. 198] I offer but 400 or 2400. For the draw answer to this, I must referre you to my Mnemonicall Table. In present tis enough to hint, that He that in a few minutes learns a Table of 400 Letter Words or Things Topically, does repeat the same Art 400 times over to arrive to his 100,000 places & Characters. And for the 2400 words he provides with like facility, 6 times 100,000 Characters & places. A quick hand will write halfe a dozen sheets, whilst the Printers are about one [but afterward the Printer overtakes the writer]. So heere, tis one thing to learn 2400 words & Characters, as Schoole Boyes learn their Lessons. Another thing to learn them so, as with the same ease & with little Engagement of the minde to be able to recite them backwards or forwards, by tenths, fifties or at any call. To the best Naturall memory such particles are as needles. A needle is hard to be found in a bundle of Ray. But if a long thread be drawn through the eye of the Smallest needle, and then hung upon a nayle, and in such order (amongst other small things) that we hang on or take off any of these small things at pleasure; Then, the more often we repair to the nayle for any small things, the better we shall know the place, and in what order they ly; and how long on or take off of the like kind. And the longer the thread is, that is put into the needle, the sooner the Needle is found, if it were in a burden of Ray. All this belongs to our Remarks. There must be a long thread & knots fastened to each of these 2400

lin 240. III. Objection. To our purpose of searching Nature, and of Prosecuting all things in their Individualls, we shall loose a losse for want of the names of Plants, Birds, Beasts, fishes, Minerals &c. Our 2400 words will soon be spent in this

lin 245. I answer (1) To these 2400 words may be added all the Characters which are so generally received already for Thaumaturgie, Astronomy, Chymistry, Of which kinde more may be daily introduced, as those Arts are more discovered more perfected in relation to more Minerals, Planets, Stars, Comets & other Phenomena, & as many more as Mathematicians shall think fit to yie us in relation to Weights, Measures, Quantity, Figure, proportions, &c. their Treatises may be rather Demonstrations to the Eye, than Ambages of unnecessary Words. In characters taken from the Arabians, let us hold a middle Temper between the Characters anciently received by them those which we now use; that ours may resemble their Originalls, as far as agrees with the speed of easy drawing

lin 257. (2) We may add as many of the best devised Real & Emblematicall Characters as the Secretary and Printer will receive. Especially, such as are of the most extensive importance. (See the mss of Short-hand) — I do againe commend Cryptographi & Brachygraphy to your care of the Royall Society: Whose affections are as well for the recovery of all ancient and true aides of Literature, as for the invention of new aides.

lin 272. (3) We may take in all Proper names of Persons and Places by the same Character, as we use it in Cryptography which hath many peculiar advantages, as well for abbreviation (though not for speed) as for memory. For let us use the names which the inhabitants doe now assume; or which are already most generally received [see the small Geographical Dictionary sold by H. Broome at the Gun in Ivy Lane. which booke reprinted with some additions and with this [Beats] Character prefixed to each name would be a great help to students of Geography & to Travellers: And would divulge the Character, and make it easy to such as can read the Booke in English or in any Translation so remarked.

lin 281. (4) All plants, beasts birds, fishes, reptiles, insects, Zoophytes, Metals, Stones, Minerals discovered in any Remote Country, best all over the world bear such names as the Natives gave them when they were first discovered, or where they are most naturally growing, or most common in use or Esteem. This layes the first corner-stone to an Universal Language. We may doe the like in things naturall & Artificiall, as the Materials of Diet, garments, Buildings.

lin 306. (5) We have a far deeper & more Philosophicall ayde, not only spreading over all Nature & all Arts, but also reaching into the secret & latent Schematismes of all things. It directs our Eyes of Body & minde to attend to the grounds, rules, rootes, or Evidences of individuation or kinde. As if we meant to specify their Nature, their names, as some say, Adam did in Paradise. And if we will doe any great matter in restoring or translating Philosophy: to this remedy we must betake. — Let us lay the foundation in inquiring more Agently the distinct shape & the Operation of all things, how ever distinguished or Confounded by one or thousand of Names. [See Dr Jungermans in a short Manuscript De cognoscendis sine duce herbis &c.] — The properties of Trees, Herbs, Shrubs, Flowers by Epithets to be found in fit places of the Table, applied to their rootes, trunks, stems, branches, leaves, stature, blossoms, may in few words distinguish & more exactly notify more kinde them than can be particularised & much less ascertained, by any Appellative in any Language whatsoever.

lin 324. When we have reduced our literary Elegances to Nature, Reason, Art, Truth & Wisdom, then we may expect more Peace, Unity, Friendship, Accommodations, Honesty, vertue, and true Christianity all over the World

lin 332. Conclusion. I am willing it should be suspected, there is some great cause of this Long Apology; That I may blush the lesse, when required to produce the prooves to the Key. In relation to the meanees and my Claimes, I cannot depress them too Low: And I can raise Expectation too high for the Ends, which (in mine own View) are more Important than I dare utter

lin 350. If accepted, I serve: If not, I am free: and shall take my leave fairly in peace & humble silence, resigning this &c

FINIS.

211. Apologies, Emblems, Sentences, Proverbs (which are required to improve the memory) or addition  
 each nation, and may be chosen the most instructive out of every considerable language may in the same  
 facility be learned used & noted. And hence also may be discerned, how some 400 short lines (each con-  
 six words and no more) of our best known language, may at 20 tryalls (20 at each Essay as due in  
 valls) be learned: Especially when assisted by all the remarks & memoricall aydes and by the secret  
 powerfull way of practice. And he that is prepared & prompted with such a choice of the most cur-  
 ious leading words [in any known language] so remarked, may (by the same remarks in any lan-  
 lin 217. which he desires to learn) be enabled to launch into the writings, and take up the discourse in any  
 Language. At least if he be of such pregnant capacity as was Julius Scaliger, who began to learn  
 (as himselfe reported) by reading Homers Iliads, & making a Grammar in his Brain, whilst he layd  
 lin 220. his course of reading: And though every man be not a Scaliger, yet the dullest may find much assistance by & meth-  
 lin 222. I. Objection. Bacon de Augm. lib. V. Cap. V. says The Art of Memory is in the mind as Tumbling in the Body; Matter  
 strangeness without Word himselfe and Barren. I referre you to my L. Bacons own judgement & dis-  
 as the best answer. He says, there is no Danger or Burden in it that may Hurt or Oppresse Naturall Memo-  
 He there complains that the Faculty is so weakly inquired [into] He offers then a better precept, and requires  
 better practices of that Art, than those he found then received. See also his Nov. Org. lib. 2. Aph. 26. And in  
 for intellectuall Powers, he blames us for not seeking those Aides which may make the mind excell in Activity  
 Vigor, as much as Tumblers doe exceed others that are unpractised in the Feates of Activity. Although  
 lin 232. these Tumbling tricks and shall leave them to those that have layd out to regard them. Yet I  
 no man in pursuing him, the easy way of gaining that agility of minde. Neither is it barren, when it is  
 and employed on those considerable Ends above mentioned.  
 II. Objection. I said above [lin 41] that I fixed in present on the just number of 100,000 Characters & places.  
 [lin 198] I offer but 400 or 2400. For the draw answer to this, I must referre you  
 Memorickall Table. In present tis enough to hint, that He that in a few minutes learns a Table of 400 little  
 Words or things Topically, does repeat the same Art 400 times over to arrive to his 100,000 places & Char-  
 lin 240. And for the 2400 words he provides with like facility, 6 times 160,000 Characters & places. A quick  
 will write halfe a dozen sheets, whilst the Printers are about one [but afterward the Printer overtake  
 writer]. So here, 'tis one thing to learn 2400 words & Characters, as Schooleboyes learn their Lessons.  
 another thing to learn them so, as with the same ease & with little Engagemēt of the minde to  
 able to recite them backwards or forwards, by texts, files or at any call. To the best Naturall memory sug-  
 particles are as needles. A needle is hard to be found in a bundle of Ray. But if a long thread be drawn the  
 lin 245. the eye of the Smallest needle, and then hung upon a nayle, and in such order (amongst other small things) that we  
 hang on or take off any of these small things at pleasure; Then, the more often we repair to the nail for an  
 small things, the better we shall know the place, and in what order they ly; and how to hang on or take off  
 of the like kind. And the longer the thread is, that is put into the needle, the sooner the Needle is found, if it were  
 in a bundle of Ray. All this belongs to our Remarks. There must be a long thread & knots fastened to each of these 2400  
 III. Objection. To our purpose of searching Nature, and of Prosecuting all things in their Individualls, we shall loose  
 a losse for want of the names of Plants, Birds, Beasts, fishes, Minerals &c. Our 2400 words will soon be spent in the  
 lin 251. I answer (1) To these 2400 words may be added all the Characters which are so generally received already for the  
 Magic, Astronomy, Chemistry, Of which kinde more may be daily introduced as those Arts are more discovered  
 more perfected in relation to most Minerals, Planets, Soars, Comets & other Phenomena, & as many more as  
 Mathematicians shall think fit to yie us in relation to Weights, Measures, Quantity, Figure, proportions, &  
 their Treatises may be rather Demonstrations to the Eye, than Ambages of unnecessary Words. In ch-  
 vers taken from the Arabians, let us hold a middle Temper between the Characters anciently received by them  
 lin 257. those which we now use; that ours may resemble their Originalls, as far as agrees with the speed of easy dra-  
 (2) We may add as many of the best devised Real & Emblematicall Characters as the Secretary and Printer  
 well receive. Especially, such as are of the most extensive importance. (See the mss of Short-hand) — I do againe  
 commend Cryptographi & Brachygraphy to your care of the Royal Society: whose affections are as well for the  
 recovery of all antient and true aides of Literature, as for the invention of new aides.  
 lin 272. (3) We may take in all Proper names of Persons and Places by the same Character, as we use it in Cryptograph  
 which hath many peculiar advantages, as well for abbreviation (though not for speed) as for Memory. For  
 let us use the names, which the inhabitants doe now assume, or which are already most generally received  
 [see the small Geographical Dictionary sold by H. Broom at the Gun in Ivy Lane. Which booke reprinted with some  
 sations and with this [Beats] Character prefixed to each name would be a great help to students of Geography  
 to Travellers: And would divulge the Character, and make it easy to such as can read the Booke in English  
 or in any Translation so remarked.  
 lin 291. (4) All plants, beasts birds, fishes, reptiles, insects, Zoophytes, Metals, Stones, Minerals discovered in any Remote Country,  
 best all over the world bear such names as the Natives gave them when they were first discovered, or where  
 are most naturally growing, or most common in use or Esteem. This layes the first corner-stone to an Universall  
 Language. We may doe the like in things naturall & Artificiall, as the Materials of Diet, garments, Buildings,  
 lin 306. (5) We have a far-deeper & more Philosophicall ayde, not only spreading over all Nature & all Arts, but also  
 into the secret & latent Schematismes of all things. It directs our Eyes of Body & minde to attend to  
 the grounds, rules, rootes, or Evidences of individuation or kinde. As if we meant to specify their Natures  
 their Names, as some say, Adam did in Paradise. And if we will doe any great matter in restoring or  
 trading Philosophy: to this remedy we must betake. — Let us lay the foundation in inquiring more  
 lin 324. Agently the distinct shape & the Operation of all things, how ever distinguished or Confounded by one or thousand  
 of Names. [See Dr Junger in a short Manuscript De cognoscendis sint duce herbis &c.] — The proper  
 lin 332. of Trees, Herbs, Shrubs, Flowers by Epithets to be found in fit places of the Table, applied to their root  
 trunks, stems, branches, leaves, Staturs, blossoms, may in few words distinguish & more exactly notify more kinde  
 them than can be particularized & much less ascertained, by any Appellative in any Language whatsoever.  
 lin 350. When we have reduced our literary Elegancies to Nature, Reason, Art, Truth & Wisdoms, then we may expect more Peace,  
 Unity, Friendship, Accommodations, Honesty, vertue, and true Christianity all over the World  
 Conclusion. I am willing it should be suspected, there is some great cause of this Long Apology; That I may blush the lesse, when requir-  
 produces the prooffe to the Key. In relation to the meanes and my claime, I cannot depress them too Low: And I can  
 raise expectation too high for the Ends, which (in mine own View) are more Important than I dare utter  
 — If accepted, I serve: If not, I am free: and shall take my leave fairly in peace & humble silence, resigning this &c  
 FINIS.

Monarcha Augustissimo, et  
 Totius Orbis terrarum Ful-  
 gori Maximo, Domino-  
 meo serenissimo, Ioh:  
 COLEO Dei gratia  
 Anglia, Scotia, Fra-  
 ncia et Hyber-  
 nia Regi il-  
 lustrissimo  
 Fidei Vr-

A Copy of Mr. Healey Letter.

93

If I had some pretty Experiment to complement Mr. Dye, the  
Minister of Maccles, a very Reverend & worthy Person, our  
neighbour here, I should, I am confident, procure of him  
the manner of making & keeping Birdlin Wine, a most  
rich Cordiall, curing Consumptions, & such inward fore  
& diseases, as follow y<sup>e</sup> Stone, in y<sup>e</sup> Bladder or reins,  
& very powerfully dissolving y<sup>e</sup> Stone itselfe. It is here  
sold for 2<sup>d</sup> the Quarte. My Lord Howe offered 10. to  
have the way taught him of making & keeping it, &  
did engage his Hon<sup>r</sup> not to divulge it. The Common  
sort of Stone bottles cannot keepe in the spirit, of it  
it is so subtil, & yet is it gentle & harmelesse in its  
operation within the body. It wonderfully sharpens  
& helps appetite, being drunke before meate. One  
Tree will yeeld 20. gallons of this Liquor in a yeare;  
& I hope the next Spring to try y<sup>e</sup> Poplar, hitherto  
accounted more Physicall then Birch. Mr. Hunton,  
our worthy Provost, tells me, That the Sap of the  
Bake of Juice, or decoction of y<sup>e</sup> inner Barke thereof,  
cures y<sup>e</sup> fashions or farcy (a very poisonous & danger  
ous disease in horses) wch like Cancers were held to  
bee incurable by any other means formerly, but  
by fire actual or potentiall. If these Experiments  
of Tapping Trees, & raising wines &c. They verbatim  
Dr. Tongue. In wch you have my former Notes more  
authenticall. The prooffe of y<sup>e</sup> Liquor of Bake for  
humane bodies, I sawe in my old Bayly. If y<sup>e</sup> Eling

Liquor

Liquor, I had y<sup>e</sup> Experiment from Mr. Evelyn, as he receiv-  
ed it with highest applauses out of Italy. Of y<sup>e</sup> Birch  
Liquor (as a Cordial & specific for y<sup>e</sup> Stone) I find it in  
Helmont, & thence can direct y<sup>e</sup> best way of taking it.  
Of y<sup>e</sup> quantity w<sup>ch</sup> a Tree yields, I hear more, than is  
here said, in y<sup>e</sup> Scot. Rattray de Sympath & Antip. &c  
I have taught my good Friend Mr. Buckl. this Art  
of Tapping Trees, in w<sup>ch</sup> we must punctually be  
carefull of y<sup>e</sup> Season, otherwise we shall fail of our Expe-  
ctation, as to my loss, I found. — I must not say  
any further trouble upon you at present, only that  
you may not take my last line to Mr. Hartlib for  
a phantastique vapor. I intend shortly to give you  
a prooffe of it in a Mnemonical Table, w<sup>ch</sup> I shall  
desire you to keepe in memory of a poore Kingman.  
I can recount unto you some of our Alliance of in-  
credible memories. And though for many yeares I  
have now beene grey; yet I am bound to bless God for a  
kind of miraculous memory, that to my knowledge hath  
not hitherto bene guilty of the loss of any one Note,  
Notion, or observation, in any Art or Science within  
the whole Encyclopedye, that at any time from my  
infancy hath bene committed to my memory. And  
having now for many yeares kept large Correspondence  
upon all promiscuous Arguments I could (before my  
papers were by Carriage disordered) fetch any line  
upon occasion out of a Tun of loose papers.

Of the Mnemonical Table, & inexplicable Character.  
When I did first hit upon it, I thought & said within my selfe,  
that it would have y<sup>e</sup> lucke of most other Noveltyes.  
The very facility w<sup>ch</sup> render it contemptible, as a mere  
juggle. And soe in y<sup>e</sup> Printing Presse, at first viewe, wee  
see are wonder in y<sup>e</sup> invention; but doe rather wonder that  
for more than 5000. yeares, none of y<sup>e</sup> great witts of y<sup>e</sup> world,  
neither Prophets, nor Magicians, neither good Angel nor  
bad, should discover an Art of such helpe use for commu-  
nication of knowledge, Learning, & all sorts of humane  
accommodations. But when I began to reduce my Notion  
to practise, I became in y<sup>e</sup> contrary y<sup>e</sup> solicitation, least  
the difficulty would bury y<sup>e</sup> matter in obscurity & so make  
it uselesse. And soe also I believe, there did intervene  
many unexpected difficulties in y<sup>e</sup> first use of y<sup>e</sup> Printing  
Presse. And tis my common Note, That though wee  
speake highly of Mathematicall certainty; yet there  
is no demonstration so sure, as demonstration of  
practise. And therefore I have now spent a weeke,  
in directing every line of a Mnemonical Table of  
great variety of colour, containing above 160000 di-  
stinct places, to w<sup>ch</sup> in y<sup>e</sup> mind are reserved 160000. dif-  
ferent Characters, every Character differing from other  
at certainty, & at first glance of y<sup>e</sup> eye to bee produced  
in a moment as distinctly proper for each place. This  
upon y<sup>e</sup> view of y<sup>e</sup> Mnemonical Table, a child (that is  
prompt in numbers) may learne in an houre or two with  
facility; & with a little practise 4. or 5. times may direct,  
or write, or interpret; soe if each of my Characters may

conferre

containe any four character of any language that I knowe.  
 And if I understood y<sup>e</sup> China Character (as I can heare of no  
 European that does) I could devise it, that each of my  
 Characters should signify any four of their word. This to  
 my selfe seem'd easy, but I found it hard to be expressed  
 for y<sup>e</sup> satisfaction & practise of others, till I devised this  
 Table. The Table containes about a square of 3 foote, or  
 somewhat more in y<sup>e</sup> along extension. And after practise  
 may be reduced to a small pocket Table booke, containing  
 one sheet of paper. Before y<sup>e</sup> Mnemonick use (which may  
 for ought I knowe, out of y<sup>e</sup> (aleb Morleyes Designe) it may  
 surely be of use, y<sup>e</sup> for Secretaries. For who will attempt  
 to decipher a writing, that must be called out of such  
 an Ocean of different Characters. Neither can that be  
 done without a proper Table: & y<sup>e</sup> Table, if ad libitum  
 alterable to many millions of millions of quires, in infinitum.  
 I made mention of such a Mnemonick Table to Mr. Green-  
 ton about 3 years agoe. But in that Country I could  
 find no man, that could assist me with his Mechanick  
 aide in such variety of colours. I must be forward to  
 acknowledge, that I had y<sup>e</sup> hint of feasibility in Lorton,  
 but that witty & industrious Italian found himself gra-  
 velled in y<sup>e</sup> invention of 400. distinct Characters, that  
 could by any signature be soone interpreted: his L B is  
 the same with A A, & some others have coincidence.  
 And yet there he undertakes much more, than in y<sup>e</sup> way  
 by him proposed is feasible. And to that use I have made  
 briefly feasible & easy, he saith, in immensa gratia crescit  
 & fastidium adfert legentibus.

 tis. lib. 2<sup>o</sup>  
 cap. 3.

Exempla admirabilis Memoriae  
ex Mureti Variarum lectionum libr. 3. cap. 1<sup>mo</sup>

Seneca lib. prim. declamationum scribit de seipso, quod duo millia nominum recitata, quo ordine erant dicta, repetere potuerit.

Muretus ait; hæc semper ipsi mirabilia ac prope incredibilia visa esse, donec ipse videret, quod nunquam credidisset; Subjungens historiam, quæ sequitur,

Habitabat Patavij in vicinia mea homo adolescens, genere Corsicus, honesto ut ferebatur, apud suos loco natus, qui eo venerat ad ius civile discendum: quo in studio ita diligenter annos aliquot consumpserat, ut magna jam esset de doctrina illius hominum opinio. Visitabat autem fere quotidie in aedes meas, devexo jam et inclinato Sole; ætas enim erat; ibique, quod aedes satis amplæ erant, satisq; apricæ, aut sub dio ambulans et cum aequalibus suis jucundissimè colloquens, aut saltu, aut lucta, aut trigonali pilâ corpus exercens, fessas studiorum laboribus vires honestissimè reficiebat. Rumor erat, tenere eum artem quandam memoriæ, cuius auxilio multa efficeret, quæ credi, nisi spectata, non possent. Is cum ad aures meas perlatus esset, cupido me inersit, mirabilia illa et inaudita spectandi: Eiusmodi enim in rebus minimè omnium auditis credulus esse soleo. Visum est igitur, quando ipse domo meâ arbitratus suo uteretur, hoc ab eo quasi ἐνὸς ἰσίου exigere, ut, quod sibi commodum foret, præsentem me, artis suæ specimen aliquod daret. Ille nihil gravatus, libentissimo animo se, cum vellem, facturum esse respondit. Placuit, statim, cum per ipsum mora non esset, una omnes qui aderamus, in proximum cubiculum ingressi, consedimus. Cæpi ego dictare nomina Latina, Græca, Barbara, significantia, nihil significantia, tam varia, tam nihil inter se coherentia, tam multa, ut et ego dictando, et puer, cui mandatum erat ut ea exciperet, scribendo, et ceteri, qui aderant, audiendo atque expectando fessi jam miris modis essemus omnes. Ipse unus ex omni numero alacer ac recens assidue plura poscebat. Sed cum ego modum aliquem fieri oportere dixissem, abundè mihi satisfactum iri, si vel dimidiâ partem eorum, quæ dicta erant, recitare posset: tum illi fixo ad terram obtutu magnâ nostrâ omnium expectatione, tacitus aliquandiu stetit. Quid verbis opus est? Vidi facinus, ut ille ait, mirificissimum. Ὁ δαιμόνιος ἐξέβητο exorsus loqui, plane omnia, eodem ordine, nusquam prope insistens, nusquam hæsitans, nobis stupentibus, reddidit. Deinde ab ultimo incipiens, sursum versus pervenit ad primum. Rursus ita, ut primum, tertium et quintum, ac sic deinceps omnia diceret. Quo deniq; quisque voluerat ordine, sine ullo errore, omnia referebat. Idem postea, cum ei jam familiarior factus essem, sæpe expertus usquequaque verum deprehendi. Ipse mihi aliquando affirmavit (et erat ab omni jactantiâ alienissimus) se triginta sex millia nominum eo modo recitare posse. Quodq; admirabilius est, ita hærebant omnia in animo, ut vel post annum diceret, se, quæcunque memoriâ commendasset, minimo negotio repetiturum. Ego certè post multos dies, facto periculo, rerum deprehendi. Neque hoc satis. Diversabatur apud me Franciscus Molinus, patritius Venetus, adolescens optimarum artium studiis mirificè deditus, qui cum se memoriâ parum firmâ esse sentiret, oravit hominem, uti se artem illam doceret. Vix ostenderat se id velle, cum Corsicus operam ei suam prolixissimè detulit. Dictus est locus, dicta hora, ad quam quotidie convenirent. Nondum sex aut septem dies abierant, cum ille quoque alter nomina amplius quingenta sine ullâ difficultate, aut eodem, aut quocunq; alio libuisset ordine repetebat. Hæc ego vix auderem literis prodere, mendacij suspicionem revereans, nisi et res adhuc recens esset (nondum enim annus est) et Nicolaum Lippomanum Petri Alexandri filium, Lazarum Mocenium, Francisium filium, Johannem Malipetrum Nicolai filium, Georgium Contarenum Laurentij filium, patritios Venetos, optimos et nobilissimos adolescentes, aliosq; præterea innumerabiles ejus rei testes haberem; à quibus, si mentirer, vanitatem meam coargui nollem. Artem verò illam Corsicus accepisse se dicebat ab homine Gallo, quo puer domestico præceptore usus esset.

Sir  
I am againe constrained to delay you till to morrow  
about ten or eleven (at latest) before-noon, by  
which time I hope I shall meet with some small reliefe  
in this strange Crisis of my busyness, which yet  
I hope will not be my ruine, though these delays  
have strangely perplexed me for the present. But  
by the unexpected Causes of delay in Cheshire it  
seemes to me certaine that (a Wiser Contriver  
than any of our Family (or indeed of Mankind)  
doth manage us as well as the whole World: Quisq;  
dabit pro incunctis aptissima quaque. But I think a Man  
may be Patient, & yet not be ~~Arbitrator~~ ~~Arbitrator~~.  
Nay rather God requires that we should both feel &  
submit to his Chastising Hand. In the meane time I send  
you Mr Beales letter to Mr W: of the principall parts of  
which relating to Minemonies if you will make excerpts  
against I see you to morrow, I will then according  
to my Directions seale it up & send it him, but Mr Beale  
desires you should see it & is very glad of your desire  
to know his Contrivances, & saith more which to morrow  
(God willing) I will shew you, & bring you Morleyes Rolls.  
I am though not to so much purpose as I wish, yet  
Your faithfull  
scholar & friend  
WB. May 21<sup>o</sup>. 6 p. m.

For Mr Pell + Rose.

May 26. 1663

Mr Brereton, 3 dayes agoe, left with me <sup>five</sup> parchment Rolls (heretofore belonging to Caleb Morley) sent up a few dayes before from Mr John Beale

1 The Broadest of them had these words written within it at one end

This Alphabet consisting of five pieces of parchment and being a disposure of vowels and consonants tending to an Art of facility and method invented by Mr Caleb Morley and presented by him to the Kings Majesty, I have perused and think it convenient & profitable to the purpose of the Author and therefore fit, according to his desire, to be printed and published by his appointment & to his use.

Croydon Septemb 17  
1623

Thomas Goade

The length of this roll is 81 inches or 6 foote 9 inches  
Its breadth is 16 inches or fete  $1\frac{1}{3}$

It begins with this Alphabet

A...BCCD...EFGGH...IJKLMNOP...OPQRST...UVWXY Z  
..aabcdd...eeffggh...iijklmn...ooprst...uuvwxy z

2. That Roll ~~which is next in breadth is~~ almost 15 inches broad: but its length is almost 15 fete or 5 yards. But about 8 inches at the end are blanke.

3. The third Roll is in breadth, Inches  $14\frac{1}{8}$ . In length 60 inches or five fete.

The two other Rolls, had each of them a wooden turned Roll at each end fastened to them with nailes and were of equal breadth about 8 inches a piece. But the greater half w<sup>h</sup>ch is blanke: the rest, about 3 inches  $\frac{1}{2}$  in breadth, ~~was~~ written on, only with combinations of consonants 6 times repeated

The combinations are onimodee, [not only of those that doe really begin some word in Latine or English or that are fit so to doe, but also] of such combinations of Consonants as can not be pronounced.

For distinctions sake

4. The 4<sup>th</sup> Roll I will call that which hath the larger wooden guards (one broken) this hath every where 6 columns but nothing in y<sup>m</sup> which was not in the first, thus

|    |    |    |    |    |    |
|----|----|----|----|----|----|
| b  | b  | b  | b  | b  | b  |
| b. | b. | b. | b. | b. | b. |
| bb | bb | bb | bb | bb | bb |
| bc | bc | bc | bc | bc | bc |
| bf | bf | bf | bf | bf | bf |
| bd | bd | bd | bd | bd | bd |
| b. | b. | b. | b. | b. | b. |
| bf | bf | bf | bf | bf | bf |

Every one of his 23 consonants hath 31 such lines as one of these is, repeating each combination 6 times.

His 23 consonants are

b. c. f. d. g. h. j. k. l. m. n. p. q. r. s. t. v. w. x. y. z.

$23 \times 31 = 713$  lines.

Note. There are some conternations written in the great margent of this Roll, many of which can scarce be read, the red inke, whereunto they were written, being naught. Some may be seen as sps, spt, spz ... sth. stl, str, str. sts. stz.

5. The 5<sup>th</sup> Roll is the same with the 4<sup>th</sup>: but written upon paper & only backed & strengthened with the parchment. Upon which are written only these numbers  
"4. 4. 5. 5. 1. 2. 2" which put together make 23. Their meaning I make no question to be this. The first section shall have combinations beginning with b. c. f. d. These are 4. The second section hath combinations beginning with f. g. h. These are 4. The third section hath combinations beginning with j. k. l. m. These are 5. The 4<sup>th</sup> section hath combinations beginning with p. q. r. s. t. These are 5. The 5<sup>th</sup> section hath combinations beginning with v. This is but 1 consonant. The 6<sup>th</sup> section hath combinations beginning with w. x. These are 2. The 7<sup>th</sup> & last section hath combinations beginning with y. z. These are 2.  
According to these unequal intervalls they stand written upon the parchment.

A. 2

Excerpta ex Architectura Militaris  
mea Membro III. Probl. II et III.

Non raro usum venit, ut numeri alicuius meminisse  
conveniat, quod absq. artis adminiculo difficile  
foret; praesertim si numeri sint plures, vel pro-  
lixiores. Quare ne pigeat addiscere modum, quo  
numerus quavis retineatur facile. Id poteris,  
si figuram quamvis numeralem syllabâ quâdam  
insignias. Faciendum est autem, ne ulla usquâ  
syllaba occurrere possit, quae ab hoc munere ex-  
cludatur, quin figuram aliquam numeralem de-  
notet. Cum vero figurae numerales sint non  
nisi decem haec: 1, 2, 3, 4, 5, 6, 7, 8, 9, 0; syllabae  
vero innumerae penè formari possint; sequitur  
quamlibet figuram numeralem multis modis  
signari posse, aliâ subinde atq. aliâ syllabâ.  
Itaq. distinguimus elementa Alphabeti in Lingua-  
les et non-Linguales. Linguales sunt: d, t,  
l, n, r, s, sic dicta, quod linguâ ad palatum  
attidente efformantur; comprehenduntur autem  
memoria causâ duabus vocibus hisce, inter Lydios,  
quorum omnes et solae consonae sunt linguales.

Non-linguales sunt coetera omnino omnes, siue  
vocaliter siue consonae. Itaque iam certum est,  
quomodo syllabam incipere à Linguali, vel  
non-linguali; cum hæc divisio omnem litera-  
rum ambitum exhaustiat. Deinde nulla non  
syllaba constat aliquâ vocali vel bivocali,  
eâq. solitariâ, vel consona uni, pluribusve jun-  
ctâ. Sed bivocales referimus ad vocales,  
vel quibus sono sunt similes, ut æ et œ refe-  
runtur ad e, cui sono accedunt; vel certè  
ad vocalium, quæ diphthongum componunt  
priorem; sic autem refertur ad a, eu ad e.  
Cum igitur vocales sint quinque numero, quam-  
vis aliqua, vel certè ejus vicaria bivocalis, syllaba  
cuiuslibet cedere debet; cumq. præterea syllaba  
quævis ordiatur à linguali, vel non-lingua-  
li, siue hæc sit vocalis, siue consona; sequitur  
porro vocalem quomodo, prout syllaba coeperit  
à linguali, vel non-linguali, duplicem signifi-  
cationem habere posse; ita nimirum quinque  
vocaliter poterunt habere bis quinque signifi-

cationes, pro numero scilicet figurarum nume-  
ralium, quas denotare debent. Determinemus  
igitur nunc syllabæ cuiusq; valorem secundum  
Tabellam subiectam:

|          |     |     |           |     |     |
|----------|-----|-----|-----------|-----|-----|
| Syllaba  | (a) | (1) | Syllaba   | (a) | (6) |
| orfa i   | (e) | (2) | orfa i    | (e) | (7) |
| linguali | (i) | (3) | non-in    | (i) | (8) |
| hærens   | (o) | (4) | gnali, hæ | (o) | (9) |
| vocalis  | (u) | (5) | rens, ro  | (u) | (0) |
|          |     |     | calis     |     |     |

Oportunum nunc fuerit, hæc ipsa exemplis  
ad rem præsentem facientibus illustrare.

Ergo accipe

Distichon Mnemonicum, proportionem,  
quæ cuiusq; Figuræ Regularis Radius  
obtinet ad Latens, exhibens in numeris  
integris centenariis minoribus.

<sup>4</sup>Arecur homo | <sup>5</sup>rendo piper | <sup>7</sup>Amphitruo | <sup>8</sup>viduam,  
<sup>9</sup>Mortua sum | <sup>10</sup>fimo murus | <sup>11</sup>esca foras | <sup>12</sup>vitulo forr.

Cuius Figura Regulari quaternae syllabae tri-  
buitur. Verbi gratia: Quadrato compe-  
tunt quatuor hae syllabae; Aræcur homo:  
Pentagono sequenter quatuor; rendo piper.  
Hexagoni Radius aequalis est Lateri, ideoq;  
adjumento non indiget; etc. Priorer duae  
quaternionis uisus syllabae, Radij nume-  
rum exprimunt; posteriores duae Lateris.  
Ita uocula Aræcur prior syllaba Aræ, cum  
ordiatur à non-linguali, habeatq; diphthon-  
gam æ (qui ad e refertur;) significat 7,  
per Tabellam superiorem. Et posterior syl-  
laba cur cum incipiat à non-linguali,  
habeatq; vocalem u; significat figuram  
numeralem 0 (quam nullam aliqui vocant.)  
Ergo, si componas has figuras numerales  
7 et 0; fiet inde numerus 70, qui est Ra-  
dius Quadrati. Rursus uocula homo  
prior syllaba ho, cum ordiatur à non-lin-  
guali, habeatq; vocalem o, significabit 9;

et posterior syllaba no, cum ordiatur simili-  
ter à non-linguali, habeatq. vocalem o, signifi-  
cabit etiam 9. Ergo, si componas figuras  
numerales 9 et 9; oriatur inde numerus 99,  
qui exprimit Latus Quadrati. Ajo igitur.  
Radium Quadrati ad eiusdem Latus habere  
rationem quam 70 ad 99. Addamus et al-  
terum exemplum, nequid defuit ad plenam  
explicationem. Heptagoni vocula est, Amphitruo.  
Hujus priorer duæ syllabæ Amphi Radium  
Heptagoni notant. Et quidem syllaba Am,  
cum incipiat à non-linguali (nam et vo-  
calis A censetur inter non-linguales) habe-  
atq. vocalem A, significabit 6. Altera syllaba  
phi, cum incipiat à non-linguali, habeatq.  
vocalem i, significabit 8. Compose 6 et 8;  
erit Radius Heptagoni 68. Rursum postero-  
rer duæ syllabæ truo, exhibent magnitudinem  
Lateralis Heptagoni. Et tru quidem syllaba,  
cum incipiat à linguali t, habeatq. voca-

lem u significabit 5. O verò syllaba, cum  
incipiat à non-linguali (nam et vocalis o  
censetur inter non-linguales) habeatq; vo-  
calem solitariam o; denotabit ob hoc 9.  
Compone jam 5 et 9; orietur Latus Hepta-  
goni 59. Dico igitur; Radium Heptagoni  
ad eundem Latus esse, ut 68 ad 59.

Hadenus excerpta ex Architectura mea Martia.  
Ceterum simili artificio quondam Sinus arti-  
ficiales memoriâ complecti conatus fui. Et  
carmina quidem, quibus illor irretieram hæc  
sunt; nimirum præmittitur Clavis duplex;  
deinde ponuntur Iambici et Trochaici mistim  
numero 90, quot sc. sunt gradûs quadrantis;  
postremo subiiciuntur aliquot versiculi minu-  
tis graduum inveniendis destinati.

Clavis prior, constans Hexametro  
unico:

LENTUM PERGIT OPUS, RATE DISTO, SUMMAQUE  
VINCO.

Clarior posterior, constans  
Hexametris sex:

Lentor querens lenis.  
( LENTUM PERGIT OPUS, pyRA monTE finDitur iSTO.  
Torvâ vi SUM misit ego MAre solus et imper:  
QUAE recinor tua mens, clivos VIN stare nitrofor,  
Nunc ape vermis homo; COgnat saltare lenili  
Scorto, non murus arma paret, vel perge vir, ibit;  
Figit COEla citò lupa; per vim prior oporâ.

Sequuntur Iambici et Trochaei  
mixtim numero 90.

An Mnemonical Probleme, Novemb. 4. 1669.

1. To devise Millions of Millions of Characters, each one soe apparently differing from each other throughout the whole immense variety, That the eye at first glance shall discern, & distinguish the Difference.
2. In a Mnemonical Table, to appoint a distinct place proper for every distinct Character.
3. By this Mnemonical Table, & y<sup>e</sup> Art thereunto belonging, to find, suggest, & provide the proper Character for each peculiar place, & with ready apprehension of y<sup>e</sup> proper importance of the Character; w<sup>ch</sup> for the most part containeth a whole English word, a small matter or business.
4. To produce the proper Character in the proper place, & in readiness for every occasion, accordingly as the immense variety of occasions may be offered, & all this in a moment, or in a twinkle of the eye.
5. To devise for this performance characters all of such easy draught, that any ordinary Secretary or Clarke, may at first triall be prompt in it, & engrosse them with dispatch.
6. To devise, That these Characters of such immense variety, may (notwithstanding the variety) be printed with so much ease & facility,

as shall only require (at most) double paines of  
other printing. [This I lay downe for fuller can-  
tion of liquid truth in all points, being of opi-  
nion, That it may be printed with more ease, &  
far greater dispatch, than other writings.]  
Of y<sup>e</sup> one I am sure; of y<sup>e</sup> other I will call it but  
hope, till I see the triall.

7. To change y<sup>e</sup> shape, & also y<sup>e</sup> force of this Character,  
& to vary it into millions of millions of guises,  
to prevent y<sup>e</sup> treachery of discovery, as oft as occa-  
sion, or care, of safety shall require.

To the Classes 3. 4. 5. 7. Note, That y<sup>e</sup> Characters  
are not written in y<sup>e</sup> peculiar place of y<sup>e</sup> Table  
(for that would engage & fixe y<sup>e</sup> memory to  
those Characters alone, & thereby hinder the  
further use of y<sup>e</sup> Mnemonical Table, or at  
least forestall against y<sup>e</sup> variety, wch may be  
necessary to prevent discovery; but, wch is far  
better, & more strange, & indeade y<sup>e</sup> maine  
pointe of y<sup>e</sup> Secrete, the Characters are re-  
taind in y<sup>e</sup> minde & in a moment producible  
in fit order for any kind of occasion.

All this, y<sup>e</sup> reading, writing, use & practice, for  
y<sup>e</sup> learning be willing, & of ordinary capacity &  
skill in Clerkship. I undertake to teach with  
ease, due vacancies, & refreshm<sup>ts</sup> in one weeke.  
To this I engage my Credit, & all that I am worth.

John Beale.

October 4. 1664.

110.

I have lately overburied you about a character,  
worthy of knowledge of greatest Secretaries,  
which, as at this time is somewhat more ripened by  
mine own experience, soe I shall herein give you  
a clearer Modell of it. You did once well accept  
of a Civile Probleme, wch I bestowed upon great  
men. Nowe I refer to your thought, A Maemo-  
nicall Probleme, wch in speeche or by transcript  
(at your owne choice) you may please to commu-  
nicate to my Cosen Iye, allowing him to shewe  
it also to M<sup>r</sup> Sherwyne, whom I doe choose to be  
witnesses, that I engage my reputation, & all that  
I am worth, for y<sup>e</sup> full performance, according to every  
Article subscribed. The time was, when a  
great Councellour told M<sup>r</sup> Sherwyne, that if  
my better imployment did not forbid it, I had bene  
fit to bee a Secretary for. Nowe I dare allowe  
him to aske Secretary Nicholas, whether hee  
knowes any man, that can goe beyond this. I shall  
hereafter shew you, that I learnt my art  
of noe man.

June 29. A. 1663

This day I first saw Mr Beale's Roll of 2 parchments. (I received it of Mr Brereton)  
The upper [or first] parchment had this title The first part of the Key

The Scheme of 400 characters.

Under this title followed a Crisum of 23 lines (and therefore 22 spaces) in a Square  
The upper limb had these titles  $\square$  ABCDEFGHILMNOPQRSTVX  $\square$   
The margin under your Left Hand had the same titles. But only in front of a lava LXX  
were not red but purple: EL were red: the others black: fgih: lmnop: rstu: black  
The dexter & infimus limb had none but these quints or 5<sup>th</sup> letters ELQX in the  
afore said colours; yet ~~match~~ catch the eye or fancy.

The other parchment hath this title The Key, the first part.  
In 49. he saith thus. I advise to proceede in this order.

1. To transcribe these [supra scriptas] 5 lines of Characters learning, at first essay, their way of Annuneration onely in round numbers. Which, beside the unides, make up but just 13 Characters.
  2. When this Numeration (to pen & memory) seems somewhat easy, then it may be perfected on the Table of 400 Characters, as farre as it goes.
- The rest I omit till this be better considered.

[illegible]

Against the 1<sup>st</sup> Object: first that He is not uniform & constant in his pointings  
about the character X (which I interpret 100) he sets only 2 points for 100 & 1000  
thus ~~100~~ <sup>100</sup>X <sup>1000</sup>X <sup>10000</sup>X But about the character X (which to me signifies 10000)  
he places his points thus <sup>10000</sup>X, <sup>100000</sup>X to signify 10000 & 100,000  
About the character X (which to me signifies 100,000) they stand thus <sup>100000</sup>X  
But about the character X he placeth 4 ~~signifying~~ points in his order <sup>1000000</sup>X  
to signify 1 with 8, 9, x. or 11 nulls after it. And so I suppose he would <sup>10000000</sup>do  
about X making prickles on y<sup>e</sup> 4 corners in y<sup>e</sup> same order to express 1 with 12, 13, 14, 15 nulls.

But secondly - I have no reason to trouble my self with all these ca-  
radars for the first Gibbons sake, wherein I have only all numbers in-  
creasing in their naturall order from 1 to 400 So that I neede not trouble ~~me~~  
so farre as 900. But in that I understand him thus.

Whereas ~~you~~ <sup>Mr. Onnis</sup> ~~asked~~ <sup>asked</sup> you to call one number ~~of~~ two hundred thirty one  
to write it thus 231. I would have you now call it ~~MMV~~ <sup>MMV</sup> & write it thus ~~XX~~ <sup>XX</sup>, which  
character is composed of the characters of M & V, but of ~~the~~ the characters  
of 200, of 30 & of 1 for X is 200 and V is 30 & 1.

So for 397 which you ~~will~~ read three hundred ninety seven. Now write  $\text{Xp}$  and read it.  $\text{X}$  the character is composed of  $\text{X}$  300 (that is 3 for 3,  $\text{X}$  for 100) and  $\text{p}$  which is 97: because  $\text{p}$  is 90 &  $\text{e}$  is 7

The 40 decaders are to be learned by rote, and then so exactly as to be recited forward, backward, & any other way at call with the duplicate letters belonging to each.

The manuscript page is filled with a complex system of symbols and numbers. The main table consists of several columns of numbers and symbols, with a central column of text. The numbers are written in a stylized, handwritten font, and the symbols are a mix of letters, numbers, and abstract shapes. The central column of text is written in a cursive script, and the marginalia are scattered around the edges of the page.

The main table is organized into several sections, with numbers and symbols arranged in rows and columns. The central column of text is written in a cursive script, and the marginalia are scattered around the edges of the page. The numbers are written in a stylized, handwritten font, and the symbols are a mix of letters, numbers, and abstract shapes.

The central column of text is written in a cursive script, and the marginalia are scattered around the edges of the page. The numbers are written in a stylized, handwritten font, and the symbols are a mix of letters, numbers, and abstract shapes.

The numbers are written in a stylized, handwritten font, and the symbols are a mix of letters, numbers, and abstract shapes. The central column of text is written in a cursive script, and the marginalia are scattered around the edges of the page.

The marginalia are scattered around the edges of the page, and the numbers are written in a stylized, handwritten font. The symbols are a mix of letters, numbers, and abstract shapes, and the central column of text is written in a cursive script.

170098176097280176091010178012099036141329372091176357045018177254098397.Hic dividat superiorem.

These three words are but a pretense to hide the true intent of the writer which was [not to know the quotient arising by dividing the greater by the lesser, but] to give two examples of writing any words by the ten Arithmetical notes or figures in such a manner as should be hard to decipher and not easily suspected. The upper number hath 96 notes, the lower hath 22 notes or figures.

The 96 figures of the upper number are separable into 32 ternions thus 109, 169, 373, 239, 684 &c as if you intended to read them by thousands & millions &c And so the lower into 24 ternions thus 170, 048, 146 &c Each ternion signifies some combination of letters, as 109 signifies IF & 170 signifies LI. That is to say, if 20 simpliciæ [letters, or what else you will] be combined all possible ways, they will produce 20 times 20, that is 400 different combinations; which may be placed in a huge number of different variety of orders. But in the order which this writer observed, IF was the 109<sup>th</sup> combination & LI the 170<sup>th</sup>. If the decipherer knew all this, yet it would cost him much labour to find a way to turne all the rest into letters, because those two IF & LI doe not oblige a writer to place the rest in any of the remaining 398 places more than in another. But the sense hidden in those two long numbers is this,

If you understand me, write downe the words which these numbers signify.

Literis exprime Latina verba his numeris. recta, si potes.

The aforesaid ternions are most easily turned into pairs of letters by the helpe of an Index like a Dictionary. The beginning & end of such a one I have been set in the margin.

A second key for the unlocking such long numbers takes up lesse room, but requires more time in the using of it; and therefore belongs rather to the second classis. It is in the form of a Cribrum, as you see here on the top of this page.

A third key belongs to decipherers of the third classis, who will not adventure to make either of those former easy keys. But will carry a precept in their minds, invented by attentive consideration of the Cribrum. The precept is this. Combinationis Tacticum dividat 20. Resi-

duat Antecedentem: Quotus unitate autus Consequentem combinationis ostendat. Ut 109 = 20 + 9 Dico igitur 9<sup>am</sup> cum 20<sup>to</sup> id est I cum F fuisse punctas in combinatione 109<sup>a</sup>.

Sic 170 = 20 + 50 Dico igitur combinationes fuisse 10<sup>am</sup> et 5<sup>am</sup> id est LI.

A fourth Key there is; which is most admirable & belongs to the Highest Classis of Admirable Decipherers who seeme to worke intuitively, as if by a spirit of Divination: but indeed by the Art of Memory have laid up the aforesaid Cribrum or Index in their heads: & can promptly use it.
